

Challenge 13 – ORM: E-Commerce

☐ Show .env file

Create the database

- ☐ Via MySQL command line: source schema.sql
- ☐ Via DDL: npm run create-db (just to show off a bit)

Create the tables in the new db and seed the data

- ☐ Npm run seed

Show the table schema and foreign indices to prove it was created correctly to the requirements

- ☐ Npm run show-schema

Start the server and sync the models using Sequelize

- ☐ Npm run start

Use the server routes via Insomnia
